SUMMARY

AI Systems Engineer at Noon Academy in Riyadh, building internal tools and AI learning platforms that reach production and are handed over to the teams that run them: a training portal, a daily HR integration and a student generative AI platform with its Arabic content. As an independent consultant I designed an auditable document intake and risk-triage system for an education platform, deciding where models add value and where fixed rules keep decisions reviewable.

SKILLS

AI and agents	LLMs, RAG, Prompt engineering, LangChain, LangGraph, CrewAI, AutoGen, MCP, Agent evaluation (LLM-as-judge), AgentOps
Programming	Python, TypeScript, JavaScript, SQL
Data	pandas, NumPy, scikit-learn, PostgreSQL, pgvector, Redis
Web and full-stack	Next.js, React, Tailwind CSS, FastAPI, Node, Convex
Cloud and infrastructure	AWS, Vercel, Docker, GitHub Actions
Ways of working	Git, CI/CD, Requirements gathering, Technical planning, Roadmap delivery, Stakeholder communication

EXPERIENCE

AI Systems Engineer, Noon Academy Jul 2026 to Present

- Built and launched an Arabic training portal for trainees, trainers and the Training & Development team; the team now runs cohorts and content without engineering.
- Built a daily Citadel to ZenHR integration for school placements and reporting lines, holding unmatched records for review; the go-live run corrected 40 of 218 records with no errors.
- Built the MCIT × Noon generative AI learning platform (student, teacher and admin flows) and wrote its Arabic learning content; live, with the classroom pilot next.
- Co-created and co-delivered the boys' AI Week session: 525 attended; 88% of 365 survey respondents were positive.

AI and Software Consultant (Freelance) Jan 2025 to Jul 2026

- Delivered an education AI system with rule-based decisions and human review: fixed rules score each student's risk and an AI model handles only the Arabic text, never the scoring, so every decision stays auditable.
- Caught corrupted source data with notes filed under the wrong students, flagged it in a data-quality review, and kept it out of anything a parent would see.
- Cut re-run cost with caching, taking a full run from about 71 model calls down to about 5.
- Added an LLM-as-judge check on every AI-written message before a person approves it, so nothing goes out unreviewed.
- Advised logistics startup FREIGHTLX on its AI architecture, helping turn requirements into a working build.

Instructor, Shaguf Educational Platform Jan 2022 to Present

- Taught 1,800+ computer science students at Shaguf over four years, with a 4.9/5 learner rating.

Staff Manager, Riyadh Metro Launch, YAX (Your Amazing Xperience) Nov 2023 to May 2025

- Managed the deployment of 1,500 staff across 85 Riyadh Metro stations in one month for the launch.

PROJECTS

Rusokh, course platform (personal project) 2026

- Built my own course platform after hitting the same gaps on other tools as an instructor. Full stack: Next.js 15, Convex, Moyasar payments, Bunny.net video, in Arabic and English. Live and in use.

Trayath, Apple AI program project 2025

- A simple assistant that helps people make better day-to-day financial decisions, built in Apple's AI program (selected 1 of 66 from over 400,000 applicants).

EDUCATION

B.Sc. Computer Science
Imam Muhammad ibn Saud Islamic University (IMSIU)

CERTIFICATIONS

Certified Data Management Professional (CDMP), Associate, DAMA, 2026.
Agentic AI Bootcamp, SDA Academy, 2026. Seven weeks, selective admission.
Apple AI Program, Apple Developer Academy and Tuwaiq, 2025. 1 of 66 selected from over 400,000 applicants.
Data Science and Machine Learning scholarship, KAUST Academy, 2025.
Introduction to Data Science, University of Michigan, 2025.
AWS Certified AI Business Strategist (Early Adopter), Amazon Web Services Training and Certification.
McKinsey Forward, McKinsey & Company, 2026.
Introduction to Artificial Intelligence, KAUST Academy, 2026.
Data Collection and Processing with Python, University of Michigan, 2025.
Vibe Coding, SDAIA, 2026.
