SUMMARY

AI Systems Engineer at Noon Academy, Riyadh. I work forward deployed: I embed with the team that owns the problem, turn ambiguity into a product, ship it fast, and hand it over so it runs without me. At Noon that includes a training portal the team can run themselves, a daily HR data integration, a student AI platform with its learning content, and an early internal placement tool for the school-staffing team.

SKILLS

AI and agents	LLMs, RAG, Prompt engineering, LangChain, LangGraph, CrewAI, AutoGen, MCP, Agent evaluation (LLM-as-judge), AgentOps
Programming	Python, TypeScript, JavaScript, SQL
Data	pandas, NumPy, scikit-learn, PostgreSQL, pgvector, Redis
Web and full-stack	Next.js, React, Tailwind CSS, FastAPI, Node, Convex
Cloud and infrastructure	AWS, Vercel, Docker, GitHub Actions
Ways of working	Git, CI/CD, Requirements gathering, Technical planning, Roadmap delivery, Stakeholder communication

EXPERIENCE

AI Systems Engineer, Central Operations, Noon Academy Jul 2026 to Present

- Built a portal in Arabic covering the trainee journey, trainers' daily work and programme administration; the Training & Development team can launch and run standard cohorts without routine engineering support.
- Built a daily integration that keeps employees' work locations, sections and direct managers in the HR platform aligned with their operational placements; go-live reconciled a few hundred records with zero errors.
- Built the student platform, teacher board and admin tools of the MCIT × Noon generative AI learning platform, and created the Arabic learning content.
- Co-created and delivered the boys' AI Week session: 525 attended; 88% positive in the end-of-session survey.
- Judged the Educational Games Industry Hackathon, run with MCIT and supported by Replit.

Co-Founder, AI and Software Consulting, GHRS Ventures Jan 2025 to Jul 2026

- Built and launched software for Saudi businesses through GHRS: rebuilt websites, automated WhatsApp Business and connected internal tools to customer channels.
- Delivered an education AI system with rule-based decisions and human review: fixed rules score each student's risk and an AI model handles only the Arabic text, never the scoring, so every decision stays auditable.
- Caught corrupted source data with notes filed under the wrong students, flagged it in a data-quality review, and kept it out of anything a parent would see.
- Added an LLM-as-judge check on every AI-written message before a person approves it, and cut a full run from about 71 model calls to about 5 with caching.
- Advised a freight company on its AI architecture.

Instructor, Shaguf Educational Platform Jan 2022 to Present

- Taught 1,800+ computer science students at Shaguf over four years, with a 4.9/5 learner rating.

Staff Manager, Riyadh Metro Launch, YAX (Your Amazing Xperience) Nov 2023 to May 2025

- Managed the deployment of 1,500 staff across 85 Riyadh Metro stations in one month for the launch. Promoted twice within a year.

PROJECTS

Rusokh, course platform (personal project) 2026

- Built my own course platform after hitting the same walls on every platform I taught on: bilingual (Arabic/English), payments, video delivery, live and in use today. Next.js 15, Convex, Moyasar, Bunny.net.

Trayath, Apple AI program project 2025

- An assistant for day-to-day financial decisions, built in Apple's AI program (selected 1 of 66).

EDUCATION

BSc Computer Science
Imam Muhammad ibn Saud Islamic University (IMSIU)

CERTIFICATIONS

Certified Data Management Professional (CDMP), Associate, DAMA, 2026.
Agentic AI Bootcamp, SDA Academy, 2026. Selective admission.
Apple AI Program, Apple Developer Academy and Tuwaiq, 2025. Selected 1 of 66.
Data Science & ML scholarship, KAUST Academy, 2025.
Vibe Coding, SDAIA, 2026.
AWS Certified AI Business Strategist (Early Adopter), Amazon Web Services Training and Certification.
McKinsey Forward, McKinsey & Company, 2026.
Introduction to AI, KAUST Academy, 2026.
Data courses, University of Michigan, 2025.
