

Yousef Alshuwayi

AI Systems Engineer

Riyadh, Saudi Arabia, yousefalshuwayi@gmail.com, +966 50 600 7446, linkedin.com/in/yousefalshuwayi, github.com/Yousef4Git, yousefalshuwayi.online

SUMMARY

AI systems engineer at Noon Academy building products that reach production and hold up there. I know where autonomy pays off and where deterministic control protects the outcome - and I design systems that non-technical teams can own after handover. Most recently: shipped a company-wide training platform in 16 days with 100% adoption, integrated into central systems by API.

EXPERIENCE

AI Systems Engineer, Noon Academy | Jul 2026 - Present

- Designed, built, and shipped the Training & Development Portal in 16 days - roughly 520 code updates and 21 database migrations - turning a daily assessment tool into the platform that runs Noon's supervisor and leadership training, with 100% adoption.
- Engineered API integrations with Noon's central database for automatic enrollment, and automated recurring reporting into HR - reliable, idempotent, and switchable.
- Designed the system so a non-technical team owns it in production: role-based experiences for four user types, full operational console, audit log, and analytics - no engineering intervention needed.
- Drove alignment across Training & Development, HR, and facilitation teams, converting competing needs into one product everyone adopted before any official rollout.

AI & Software Consultant (Freelance) | Jan 2025 - Jul 2026

- Shipped a production AI system for an education platform where deterministic rules own the decisions and the model handles only language - every output gated by an LLM-as-judge before a human sees it.
- Cut inference cost of a full pipeline run by ~93% through caching and pipeline design.
- Advised an early-stage logistics startup (FREIGHTLX) on where AI earns its place in the architecture - and where it doesn't.

Instructor, Shaguf Educational Platform | Jan 2022 - Present

- Taught 1,800+ computer science students over four years, holding a 4.9/5 learner rating.

SKILLS

Agentic AI: LangGraph, CrewAI, AutoGen, MCP, RAG, prompt engineering, evaluation with LLM-as-judge, AgentOps

Engineering: Python, TypeScript, SQL, FastAPI, Node, Next.js, React, PostgreSQL, pgvector, Redis

Production: AWS, Vercel, Docker, GitHub Actions, API integration, caching, cost control, auditability

SELECTED PROJECTS

- **Rusokh - course platform** (2026) - Built my own bilingual course platform after hitting the gaps in existing tools as an instructor. Live and in use. Next.js, Convex, payments, video delivery.
- **yousefalshuwayi.online - portfolio with built-in AI chat** (2026) - A portfolio shipped as a product: streaming AI chat that answers as me, with rate limits, validation, and prompt guardrails.

EDUCATION

B.Sc. Computer Science - Imam Muhammad ibn Saud Islamic University (IMSIU) | Expected Jan 2027

CERTIFICATIONS & PROGRAMS

- Apple AI Program, Apple Developer Academy & Tuwaiq, 2025 - selected 1 of 66 from 400,000+ applicants
- Agentic AI Bootcamp, SDA Academy, 2026 (selective admission)
- Certified Data Management Professional (CDMP) Associate, DAMA, 2026
- McKinsey Forward, McKinsey & Company, 2026
- AI & Data Science programs, KAUST Academy, 2025-2026

LANGUAGES

Arabic (native), English (professional working proficiency)
